

Protection from Pesticides

Janet Grogan

Promoter: Food Watch

There is increasing evidence of the risks posed by
Roundup/Glyphosate

“Roundup Ready” GM Corn study by the University of Caen, France and the University of Verona, Italy, shows tumours in rats. Similar disturbing tumours can be seen in children exposed to Roundup/GLYPHOSATE in Argentina

Birth Defects linked to low levels of Glyphosate

**Disturbing video evidence of Glyphosate use in
Argentina shows:**

- **The tragic human consequences of GLYPHOSATE spraying of GM soy in Argentina, including babies with birth defects**
- **Interviews with Dr Dario Gianfelici, a medical doctor**
- **Scientist Prof Andres Carrasco, whose research shows that GLYPHOSATE/Roundup causes birth defects in doses far lower than those used in agricultural spraying**
